

Router Installation Service

Reliable Installation
and Configuration
for Your Router

Key Benefits

How to Order

Router Installation Service ensures a successful result while minimizing the risk of disruption to your business. 3Com familiarity with the process and the equipment translates into faster deployment.

Expert Assistance

Engineers experienced with 3Com equipment and multi-vendor environments manage the installation from start to finish. This service includes placing the equipment in racks you provide, connection to premise cabling, power-up, configuration, testing, and documentation.

Configuration

Router software is configured to meet the customer's requirements. All 3Com software is upgraded to the version level that was current when the product was purchased.

Presales Contacts

3Com Router Installation Service is available in Canada and the United States. Please contact your local 3Com sales office or service reseller to order service, or for additional information. Verify contact details for your region at www.3com/global/world.

You reap long-term benefits knowing that your installation follows industry standards and that your product is configured to take full advantage of all included features.

Verification Testing

Before leaving your facility, the engineer ensures that the new equipment is operational and working correctly in the network environment. A thorough testing procedure verifies that the 3Com equipment meets all product and network specifications.

Documentation and Training

Key network configuration details are documented in writing and provided to you for future reference.

Statement of Work

A Statement of Work is provided that specifies the deliverables and requirements in detail.
